Readiness diagnostic: what it measures, placed on the USAFacts ladder

Readiness diagnostic: what it measures, placed on the USAFacts ladder

Generated by `scripts/readiness_rollup_build.py` from the framework record and the cycle of record.

The readiness diagnostic places its checks on USAFacts' August 2026 framework for AI-ready government data: three tracks, Agentic Access, Agentic Context and Agentic Evaluation, three levels in each, with three prerequisites that hold before any level applies. That framework grew from USAFacts' earlier guide to *AI-ready data*, whose four criteria the diagnostic first used; the checks are the same readings, re-parented onto the ladder an agency climbs at its own pace.

USAFacts rung	What the framework asks for	Checks	Quality concern	Agencies passing every check in this rung^a
Prerequisite, discoverable	Data should be registered on Data.gov or otherwise accessible through the open web.	Three checks: The data page is in the site's list of pages (Scored); The page labels itself as a dataset; The product is listed in the agency's data inventory (Scored)	Find and obtain; metadata	zero of sixteen
Prerequisite, clearly licensed	The data's usage license stated in plain language on the data product's landing page, not just buried in metadata.	One check: The terms of reuse, under a recognised name	Metadata	zero of sixteen
Access I	Data is published in machine-readable files	Six checks: Data offered as a file a program can read (Scored); The whole dataset in one download (Scored); Whether the site's visitor rules let AI tools in; The interactive data tool answers honestly; What the site states about automated access; The site serves what its own rules permit	Find and obtain; usable format	eleven of sixteen
Access II	Stable, documented endpoints agents can crawl	Four checks: A published description of the agency's data service; A front door built for programs; From a data page to the data service, terms, change log and inventory; A change history a program can follow	Find and obtain; understand; usable format; metadata	one of sixteen
Context I	Definitions and units documented for humans	One check: The methods are readable as plain text	Understand	two of sixteen
Context II	Methodology and caveats travel with each dataset	One check: The release date, and a link to the latest release	Metadata	one of sixteen
Access III	Agent-native interface for live, structured queries	None		none measured
Context III	Context is machine-readable and citable in an answer	None		none measured
Evaluation I	A published evaluation set with reported pass rates	None		none measured
Evaluation II	Continuous automated evaluation at scale	None		none measured
Evaluation III	Integrated quality assurance programs across agencies and industry	None		none measured

^a An agency passes a rung when none of the rung's checks that could be measured for it comes back fail; a check not measured for an agency, or not measured on the cycle of record at all, is left out of that agency's count and is never read as a fail.

Checks are placed on USAFacts (2026), *AI-ready data*, August 2026 framework; concerns from FCSM 20-04, Accessibility dimension, after Webb 2026.
