

Governance

Governance in AI demands a rigorous commitment to data privacy, sovereignty, and fairness. Ensuring transparency in algorithms, adherence to global privacy standards, and safeguarding data sovereignty are paramount to fostering trust and ethical AI practices.

What is the level of awareness across your organization regarding potential biases and fairness in data sets used for AI?

- ☐ High awareness: regular training sessions and active discussions around biases
- ☐ Moderate awareness: occasional training or awareness programs in place
- ☐ Limited awareness: sporadic discussions but no formal understanding
- ☐ Not aware: haven't considered biases in our data

Does your organization have mechanisms to actively detect biases and lack of fairness in data used for AI?

- ☐ Diversity in external data is a priority; regular checks for biases are conducted with continuous monitoring and adjustment
- ☐ We actively seek diverse data sources and occasionally audit for biases
- ☐ We try to use diverse data but don't have systematic checks in place
- ☐ This isn't a focus for us currently

How does your organization handle and rectify identified biases and lack of fairness in data?

- ☐ Systematic process for bias and fairness correction with dedicated teams and proactive strategy for bias prevention and rectification, and ensuring fairness, ingrained in data

management

- ☐ Biases are addressed on a project-by-project basis
- ☐ Acknowledge biases but lack systematic correction mechanisms
- ☐ No formal process for rectification

How transparent are the algorithms used in your AI systems in terms of their decision-making processes?

- ☐ Highly transparent: can trace most decisions back to specific factors
- ☐ Moderately transparent: essential decision factors are known
- ☐ Limited transparency: some understanding but lacks depth
- ☐ Completely black box: no understanding of decision mechanisms

Does your organization have mechanisms to detect biases and ensure fairness in AI algorithms?

- ☐ Regular comprehensive automated checks with continuous monitoring for algorithmic biases complemented with manual reviews
- ☐ Automated bias detection tools in place but not used consistently
- ☐ Sporadic manual reviews
- ☐ No mechanisms in place

What is the level of understanding across your organization about global data privacy standards (like GDPR, CCPA, etc.) and ensuring adherence to these in AI projects?

- ☐ High understanding: strict adherence with regular audits and review and a proactive strategy to stay ahead of global privacy norms and regulations
- ☐ Moderate understanding: have protocols in place, but occasional lapses occur
- ☐ Basic understanding, but no systematic adherence
- ☐ Unaware of global privacy standards

How does your organization handle data anonymization to protect user privacy in AI datasets?

- ☐ Consistent anonymization techniques across all datasets
- ☐ Advanced anonymization techniques for most AI datasets
- ☐ Basic anonymization techniques applied inconsistently
- ☐ No anonymization: data is used as is

In case of a data breach or privacy violation, how prepared is your organization to address and rectify the situation?

- ☐ Advanced protocol: regularly reviewed with mock drills and updates, continuous monitoring and rapid response teams
- ☐ Structured protocol with designated teams but rarely reviewed
- ☐ Basic protocol, but not comprehensive or tested
- ☐ No established protocol for breaches

How well-versed is your organization in data sovereignty laws and regulations across different regions/countries?

- ☐ Detailed knowledge of varied jurisdictions with experts on board
- ☐ Good understanding of major regions/countries
- ☐ Basic awareness but lacks depth
- ☐ Not aware of data sovereignty laws

How does your organization ensure that data storage and processing align with local data sovereignty requirements?

- ☐ Strict protocols with data mapped and stored according to local laws and sovereignty rules
- ☐ Advanced Protocols: regular checks to ensure compliance with major regions' sovereignty laws
- ☐ Basic protocols: some alignment with sovereignty laws, but not consistent

- ☐ No specific protocols: data is stored wherever convenient

How does your organization handle cross-border data transfers, ensuring they adhere to data sovereignty laws?

- ☐ Rigorous checks ensuring every transfer aligns with local sovereignty laws
- ☐ Structured protocols for most cross-border transfers
- ☐ Aware but might have occasional lapses in adherence
- ☐ We don't consider sovereignty during cross-border transfers

How comprehensive are the AI policies and protocols in your organization overall?

- ☐ Highly comprehensive policies
- ☐ Moderately comprehensive
- ☐ Limited
- ☐ We do not have any
